

Va Health Care: Mild Traumatic Brain Injury Screening and Evaluation Implemented for OefOif Veterans, But Challenges Remain: Gao-08-2

By -

Bibliogov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 58 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. Traumatic brain injury (TBI) has emerged as a leading injury among servicemembers serving in the Operation Enduring Freedom (OEF) and Operation Iraqi Freedom (OIF) combat theaters. The widespread use of improvised explosive devices, such as roadside bombs, in these combat theaters increases the likelihood that servicemembers will be exposed to incidents that can cause a TBI. TBIs can vary from mild to severe, and in general, mild TBI can be difficult to identify. Because mild TBI can have lasting effects if not identified and treated, concerns have been raised about how the Department of Veterans Affairs (VA) identifies and treats OEFOIF veterans with a mild TBI. In this report GAO describes VAs (1) efforts to screen OEFOIF veterans for mild TBI, (2) steps taken so that those OEFOIF veterans at risk for mild TBI are evaluated and treated, and (3) challenges in screening and evaluating OEFOIF veterans for mild TBI. GAO reviewed VAs policies, interviewed VA officials and TBI experts, and reviewed nine VA medical facilities efforts to implement TBI screening and evaluation processes. This item ships from La Vergne, TN. Paperback.
