

Characteristic of Wollastonite Synthesized from Local Raw Materials

By Mohammed Obeid

GRIN Verlag GmbH Apr 2015, 2015. Taschenbuch. Book Condition: Neu. 211x146x15 mm. This item is printed on demand - Print on Demand Neuware - Research Paper from the year 2014 in the subject Chemistry - Materials Chemistry, , language: English, abstract: In this study, wollastonite (CaSiO_3) has been synthesized by solid state reaction method at temperature range of 1050-1300 C from local raw materials e.g. silica sand and limestone with addition of small amount of B_2O_3 as a mineralizer to activate the reaction process during sintering. The resulting products are investigated employing XRD and SEM techniques. -wollastonite was obtained at 1050 C and transformed to pseudowollastonite (CaSiO_3) at 1150 C. Physical and thermal properties have been evaluated. The batch sintered at 1250 C showed the highest value of density of about 1.98 g/cm^3 with high shrinkage rate as compared with other batches. The results also revealed that thermal expansion coefficient is more compatible with results obtained from natural wollastonite. 8 pp. Englisch.

Reviews

This pdf is so gripping and exciting. It can be full of knowledge and wisdom I am just effortlessly could get a enjoyment of reading a published pdf.

-- **Henri Gutkowski**

This ebook is definitely not straightforward to begin on studying but quite fun to read. It is one of the most awesome book i actually have go through. Once you begin to read the book, it is extremely difficult to leave it before concluding.
